JavaScript function

Write the JavaScript code to implements the following using function

❖ the addition , subtraction ,multiplication and division of two number
1. that calls it self
2. that call by button (onclick function)
3. That call by JavaScript code
❖ Write program that implements the following formula (y=mx+c) then when you input the m value and c value will give you expression. ex(y=5x+6)
❖ Write program to perform the following

A basic HTML table

Company	Contact	Country
Alfreds Futterkiste	Maria Anders	Germany
Centro comercial Moctezuma	Francisco Chang	Mexico

❖ Write a program that will perform the following declaration const number =[1,2,3,4,5];
Then the function must return double of it number *2;
Output must be [2, 4, 6, 8, and 10]

❖ Create function that will repeated the statement using only one function , this function will help to produce more then one statement using parameter declared ex function myfun(my)
{
Code will run here
}
Const name 1= myfun(any word);
Const name 2=myfun(any word);

So you can either use (document, alert or console) to print and out put

The out putt will be   example HELLO, REHEMA

HELLO, AWATIF

❖ Please don't use **chartgpt,poe or any artificial intelligence AI** to do this use your mind and either google , or w3school allowed

❖ **Note use JavaScript ,css,html to do this**
